DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6 and 10-11 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's independent claim 1: The present invention is directed to a radio base station system formed of one master base station, a plurality of slave base stations, and a control device controlling the master base station and the slave base stations, the independent claim identifies the patentably distinct feature, "slot setting means for setting, as a reception control slot, a predetermined reception slot in the frame of said slave base station matching in timing with a reception control slot in the frame of the master base station; each of the base stations includes: reception level obtaining means for obtaining a reception level corresponding to a received signal strength of said set reception control slot when a link channel establishment request message is received in said set reception control slot, and traffic channel allocating means for allocating a traffic channel with respect to a mobile station transmitting the link channel establishment request message to predetermined transmission and reception slots in the frame according to a traffic channel allocation instruction; and the control device includes: allocation instructing means for receiving the reception level from each of the base stations, determining the base station of the maximum reception level and transmitting the traffic channel allocation instruction to the determined base station". Applicant's independent claim 1 comprises a particular combination of elements, which is neither taught nor-suggested by prior art.

Applicant's independent claim 4: The present invention is directed to a channel allocation method in a radio base station system formed of one master base station, a plurality of slave base stations and a control device controlling the master base station and the slave base stations, the independent claim identifies the patentably distinct feature, “causing the slave base station to set a predetermined reception slot in the frame of said slave base station matching in timing with the reception control slot in the frame of the master base station as the reception control slot; causing each of the base stations to obtain a reception level corresponding to a received signal strength of the set reception control slot when the base station receives a link channel establishment request message in said set reception control slot; causing the control device to receive the reception level from each of the base stations, determine the base station of the maximum reception level and transmit a traffic channel allocation instruction to the determined base station; and causing the base station receiving the traffic channel allocation instruction to allocate a traffic channel with respect to a mobile station transmitting the link channel establishment request message to the predetermined transmission and reception slots in the frame”. Applicant's independent claim 4 comprises a particular combination of elements, which is neither taught nor-suggested by prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance."
